Cumberland PRODUCTS

CUMBERLAND TOOLS QUALITY PRODUCTS, COMMON SENSE

Cumberland Products strive to make every field engineers' work a little easier and is based on one simple concept - common sense.

Cumberland Products is a manufacturer of specialty custom products for the utility industry. They offer a variety of tools, fabricated steel products, and plastic molded parts to help improve efficiency and make those tough-to-get-to jobs easier.

As you look through their products, you will see a true customization to the work. That's because many of their products are a direct result of fulfilling requests from utilities across the country. These tools are ergonomically designed, economically produced and built to make the job easier for the utility workers.

Cumberland Products have many applications and can be utilized in the Util-

ity, Municipal, and HDD markets. These tools also pair well with other Tecvalco products, making them a valuable asset to the Tecvalco product line.

For example, Cumberlands' EZ T-Probe can act as a poker to find buried curb boxes while working with the FML-3 when doing curb box locating.

The Tubing Multi Clamp and Mainline Scrapers can both be used during the electrofusion process. The clamp can be configured in 16 different ways to secure PE pipe, while the Scrapers can prep the pipe for electrofusion saddle applications.

Tecvalco Ltd. prides itself on choosing product lines that are ecofriendly, ergonomically designed, and economically produced. Cumberland Products is a vital line to the Tecvalco catalog that we are proud to distribute.

CUMBERLAND TOOLS TECVALCO OFFERS

- Gas Tornado
- Ground Rod
- Jack Plunger
- Meter Nut Wrench
- Pipe Wrench Assist
- Pulling Plug / Pulling Head / Weak Link / Mud Plug
- Electrofusion Products
- Plastic Products
- Purge / Test Fitting
- Regulator Tester
- Regulator Tool
- T-Probe
- Valve Cover Lifter
- Valve Key Wrench

WE STRIVE TO MAKE EVERY FIELD ENGINEERS' WORK JUST A LITTLE EASIER!

THE GREENER SIDE OF HEATING NATURAL GAS

CWT Natural Gas Dry Line Heaters lead the pack in environmental responsibility and economic viability. Tecvalco Ltd. and the CWT heaters have a solid history of engineering and design behind them. Utilizing a unique Heat Driven Loop (HDL) technology, these heaters show major improvements over the traditional glycol-bath heaters, especially in **improved safety, thermal efficiency, and a reduced impact on the environment.**

These heaters drastically reduce the amount of glycol used, and replace the highly-problematic firetube with a much more efficient system of heat transfer. The

reduction in glycol means eliminating a large cost associated with the fluid and containment, as well as being another way that the CWT heater is more environmentally responsible. Also, removing the glycol bath allows the CWT heater to be more responsive to the inlet conditions of the natural gas, this, combined with the fact that the heater is only burning ounces of fuel gas, means a major reduction in how much gas the unit uses. Some field units have seen as much as 70 per cent reduction, but the standard falls more around 50 per cent.

The CWT heater operates under a vac-

uum, with the air being removed from both the evaporator and the condenser parts of the heater. This allows the water to boil at a much lower temperature, resulting in a more effective heat transfer, and therefore less fuel gas required for heating. As a nice side affect, the vacuum also means there is no corrosion inside the unit. This significant reduction in fuel gas consumption translates to a reduction in greenhouse gas emissions. Tecvalco is proud to produce and distribute a unit that is safe, efficient, easy-to-use, and eco-friendly.

Reduced Fuel Consumption of up to 70% (Typically 50%)

Reduced Greenhouse Gas Emissions of 50%

Reduced Heat Loss

Reduced Physical Footprint (Compared to Traditional Units)

- 

ECO-FRIENDLY
- 

EASY-TO-USE
- 

COST-EFFECTIVE

ON THE ROAD

TRADE SHOW ROUND UP

July was a quieter month on the trade show circuit. Jim and Jason travelled to Pennsylvania for the Appalachian Gas Measurement Short Course. There they showcased our CWT technology!

VERSAPROFILES

With over 50 years of experience in thermoplastic extrusion, Versaprofiles offers innovative products to make your job easier and lighten your workload. With pipe and tubing for maple sap, geothermal, water, and natural gas distribution applications in addition to specializing into custom made profiles. With collective expertise in various sectors and versatile equipment, Versaprofiles can bring your projects to higher levels.

The resin used for Versapipe 4710 Gas and Versapipe 2708 BM Gas products lead to pipes featuring exceptionally high long-term hydrostatic strength, along with outstanding resistance to slow crack growth and to rapid crack propagation. This results in a very tough product, permitting a longer installation season, a higher product life, and a lower lifetime cost.

The strict safety rules of the natural gas industry are top priority at Versaprofiles. By using tools at the cutting edge of technology to perform real-time control of our pipe sizes, we guarantee maximum quality at all times.

PRESIDENT'S MESSAGE

This time of year all of the children are excited to be on Summer vacation, all of us are rushing around trying to make sure we can juggle the family, the nice weather, and all of the extra fun that this time of year brings us. My message this month to all of you is to take your time, be careful, drive safely, and keep in mind that the little ones in our world both two- and four-legged are more distracted than ever. Be safe, love and peace to you, your families, and your pets!
